

Introduction / About Us

Caniverse is a forward-looking blockchain ecosystem built to deliver real-world solutions beyond speculation. Founded on the principle of combining technology, sustainability, and f nancial empowerment, Caniverse is creating an ecosystem where blockchain is not just traded but truly used.

The ecosystem operates through a dual-token model:

CNV (Caniverse Token) – the primary utility token, restructured with a revised supply of 3 trillion coins (down from the original 500 trillion) to ensure long-term scarcity, stability, and value growth.

CDG (Caniverse Digital Gold) – a digital asset designed as a store of value within the Caniverse framework, complementing CNV with unique use cases.

Introduction / About Us

Our mission is simple yet powerful: to bridge blockchain with realworld needs. This vision is being realized through:

Eco-Friendly Energy Solutions: Deployment of Magno Kinetic Energy Supply (MKES) generators that provide clean, reliable, and affordable electricity.

Layer 1 Blockchain Development: Building a secure, scalable, and interoperable blockchain to serve as the backbone of the Caniverse ecosystem and beyond.

Exchange & Payment Infrastructure: Creating platforms that allow tokens to be seamlessly swapped, traded, and used for essential services like airtime, data, and commerce.

Humanitarian & Social Impact: Expanding access to electricity, education, and financial inclusion across underserved communities.

Caniverse is more than just another crypto project. It is a movement, one that stands for utility, transparency, and sustainability, paving the way for blockchain technology to become a trusted tool for global transformation.

Executive Summary

Caniverse is a blockchain ecosystem designed to deliver real-world value through innovation, sustainability, and financial empowerment. Built on the Binance Smart Chain, Caniverse integrates clean energy solutions, blockchain infrastructure, and digital finance to address global challenges such as energy insecurity, limited blockchain scalability, and financial exclusion.

The project operates through two tokens:

CNV (Caniverse Token) – recently restructured from 500 trillion to 3 trillion supply, ensuring scarcity and long-term sustainability. CDG (Caniverse Digital Gold) – a complementary asset built to preserve value within the ecosystem.

Executive Summary

Key initiatives include:

Magno Kinetic Energy Supply (MKES) Generators providing eco-friendly electricity.

Development of a Layer 1 Blockchain to ensure scalability, interoperability, and enhanced security.

Caniverse Exchange & Payment Infrastructure to enable seamless transactions and real-world utility.

Humanitarian Efforts focused on electrification, education, and youth empowerment.

Caniverse is not a speculative project but a movement towards blockchain with impact. By aligning digital assets with tangible use cases, Caniverse positions itself as a sustainable force in the evolving global economy.

Problem Statement

The cryptocurrency market is crowded with tokens lacking real-world use, creating volatility and distrust. Meanwhile, energy insecurity, blockchain scalability issues, and financial exclusion remain unsolved. This gap between hype and practical impact prevents blockchain from achieving its potential. Caniverse addresses this by delivering clean energy, building a Layer 1 blockchain, and driving sustainable financial inclusion.

Our Technology Solutions

Caniverse delivers practical innovations that merge blockchain with real-world needs:

- 1. Magno Kinetic Energy Supply (MKES) Generators Clean, reliable, zero-carbon energy solutions for households and industries, with IoT integration for blockchain-based performance tracking.
- 2. Layer 1 Blockchain (Upcoming Project) A secure, scalable, and interoperable blockchain serving as the backbone of the Caniverse ecosystem.
- 3. Caniverse Exchange & Payments Platforms enabling token swaps, real-world transactions, and integration with global payment networks.
- 4. Humanitarian Initiatives Expanding access to electricity, education, and financial inclusion in underserved regions.

- 5. Economic and Social Benefits: The Caniverse token allows holders to purchase or rent these reliable, clean energy solutions, offering a financially efficient alternative. This approach boosts regional economies by generating jobs and promoting the transfer of skills, with production and maintenance facilities ensuring the product's social and economic advantages. **Whale Program**
- 6. Caniverse has introduced a **Whale Program** to ensure stability and long-term growth. Large token holders (whales) have their allocations locked under smart contracts to prevent sudden sell-offs. Instead of flooding the market, these tokens are gradually released as **staking rewards**, supporting community engagement and rewarding loyal holders.

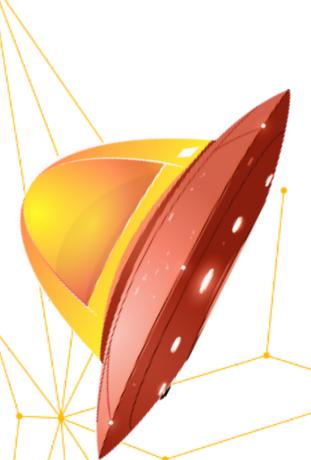

Key Features MKES Generator

Magnetic Field Utilization: Harnesses magnetic fields for 50Hz electricity generation, eliminating reliance on traditional fuels or renewable sources.

- 24/7 Reliable Power: Integrates seamlessly with existing electrical circuits, ensuring continuous, dependable power without battery storage. Safety and Comfort: Equipped with advanced cooling and
- noise reduction features, prioritizing user safety and comfort. Cost-Effectiveness: Significantly reduces energy bills, emerging as a long-
- term, economical investment compared to conventional sources.

 Patent Protection: Secured patents offer market exclusivity and a
 competitive edge in the evolving energy landscape. 2-Year Warranty:
- Provides users peace of mind and confidence in the product's quality.

TOKENOMICS

Caniverse's tokenomics are designed for sustainability, scarcity, and long-term growth. Our dual-token ecosystem consists of:

1. CNV (Caniverse Token)

Original Supply: 500 trillion

Revised Circulating Supply: 3 trillion (2 trillion for future projects & burning) and 1 trillion for circulating supply

Purpose: Primary utility token powering the ecosystem, used for transactions, services, and access to Caniverse infrastructure.

This restructuring strengthens value by reducing oversupply and aligning CNV with global standards for sustainable token economies.

Key Features of Caniverse Game

2. CDG (Caniverse Digital Gold)

Functions as a complementary digital asset and store of value. Supports broader use cases across exchange, payments, and future Caniverse integrations.

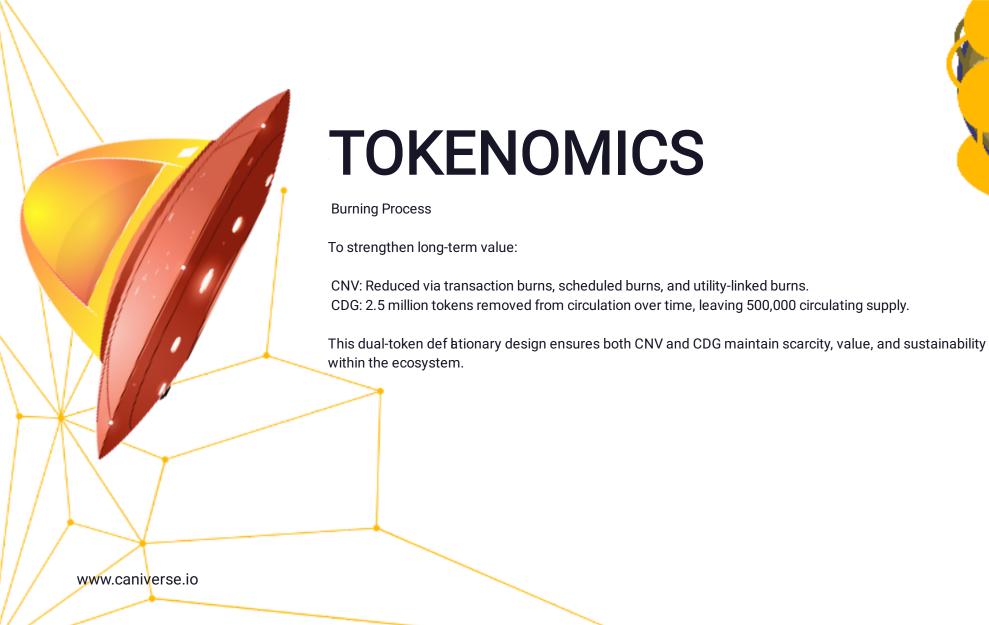

Initial Supply: 3 million

New Circulating Supply: 500,000

Burn Strategy: 2.5 million CDG will be gradually burned over time to create

scarcity.

Key Features of Caniverse Game

2. CDG (Caniverse Digital Gold)

Functions as a complementary digital asset and store of value. Supports broader use cases across exchange, payments, and future Caniverse integrations.

Initial Supply: 3 million

New Circulating Supply: 500,000

Burn Strategy: 2.5 million CDG will be gradually burned over time to create

scarcity.

Future Projects and Humanitarian Effort

- 1. Caniverse Layer 1 Blockchain Development
- 2. Expanded Crypto Payment Infrastructure
- 3. Philanthropy and Social Impact Initiatives
- 4. Youth Empowerment and Innovation in Africa

Future Projects

Expansion of Utility

To strengthen the real-world utility of the Caniverse token ecosystem, we are proposing the development of a dedicated mobile application that will enable users to exchange CNV (Caniverse Token) and CDG (Caniverse Digital Gold) for airtime and data services.

This initiative aims to provide immediate, tangible value to token holders by facilitating essential digital services through blockchain-based transactions.

Key Functional Highlights:

Token Exchange for Services: Users will be able to exchange CNV and CDG directly for mobile airtime and data.

Immutable Transactions: Once tokens are sent to the application, the transaction will be irreversible, promoting commitment and transactional integrity.

Scalability: In future development phases, we plan to integrate Naira (**) and other fiat currencies via a secure gateway, further broadening accessibility and adoption across local and regional markets.

TOKENOMICS

Caniverse's robust tokenomics are designed to fortify the project's long-term sustainability. Every transaction involving Caniverse tokens incurs a 10% tax, strategically supporting crucial aspects of the Caniverse ecosystem. The tax revenue is allocated as follows:

- 5% for Marketing: Enhances visibility, fosters community engagement, and propels Caniverse into the forefront of the cryptocurrency realm. 5% for Verge Staking Rewards:
- Promotes a dynamic and rewarding ecosystem by leveraging Verge's efficiency.

By integrating robust tokenomics with a transparent and strategic token distribution model, Caniverse fosters a balanced, inclusive, and sustainable ecosystem. This approach not only incentivizes holding Caniverse tokens but also strategically supports marketing, partnerships, community expansion, and philanthropic initiatives.

Q1 2022

Project initialization and vision development.

Q4 2023

Launch and whitepaper release, marketing on different platforms.

Q3 2024

Development and Listing of Caniverse Digital Gold Token (CDG) on Pancakeswap

Q4 2025

Listing CNV on Major cryptocurrency trading platforms

Q2 2022

Team finalization and concept refinement.

Q1 2024

Pre-sale, public sale, game launch, development of exchange launch, and processes for listing on major platforms commence

Q1&2 2025

restructuring total
supply of CNV and
CDG tokens through
burning
